Read the following passage and mark the letter A, B, C, or D on your answer sheet to indicate the option that best fits each of the numbered blanks from 1 to 6.

Throughout history, inventions have played a crucial role in shaping our world and improving our quality of life. From the wheel to the smartphone, each invention represents a significant (1) _____ in human knowledge and technology. Many of these breakthroughs were the result of scientists (2) _____ for years in their labs. For example, the invention of the telephone, often attributed (3) _____ Alexander Graham Bell, completely revolutionized communication. The first computers were (4) _____ machines that took up entire rooms. However, thanks to continuous innovation, we now have powerful devices that fit in our pockets. Inventions (5) _____ with the goal of solving real-world problems often have the greatest impact. The internet is a prime example of a great invention that has made it (6) _____ to connect with people worldwide.

Question 1. **A.** advance **B.** advanced **C.** advancement **D.** advancing
Question 2. **A.** toiling **B.** to toil **C.** toil **D.** toiled
Question 3. **A.** with **B.** for **C.** to **D.** on
Question 4. **A.** enormous old gray **B.** gray enormous old **C.** old gray enormous **D.** enormous gray old
Question 5. **A.** creating **B.** created **C.** to create **D.** create
Question 6. **A.** easier **B.** easy **C.** easily **D.** easiness

Read the following passage and mark the letter A, B, C, or D on your answer sheet to indicate the option that best fits each of the numbered blanks from 7 to 12.

REVOLUTIONARY INVENTIONS SHAPING OUR FUTURE

• **Why Innovation Matters** Throughout history, groundbreaking inventions have continuously (7) _____ the way we live, work, and communicate, making our daily lives more convenient and efficient than ever before.
• **From Idea to Reality** Many successful inventors (8) _____ extensive research and experimentation before their creative ideas become practical solutions that benefit millions of people worldwide.
• **Building on Past Achievements** (9) _____ previous scientific discoveries and technological breakthroughs, modern inventors are able to create increasingly sophisticated devices and systems.

• **User-Friendly Design** The most successful inventions are those that feature (10) _____ interfaces and designs, allowing people of all ages and technical backgrounds to use them effectively.
• **Start with Simple Ideas** Even developing (11) _____ knowledge in science and technology can inspire you to think creatively and potentially contribute to the next generation of innovations.
• **Growing Innovation** The global innovation landscape is expanding rapidly, with the (12) _____ of patent applications filed each year reaching unprecedented levels across various industries.

Question 7. **A.** complicate **B.** transform **C.** restrict **D.** abandon
Question 8. **A.** carry out **B.** turn away **C.** give up **D.** put down
Question 9. **A.** Instead of **B.** In spite of **C.** Based on **D.** Regardless of
Question 10. **A.** confusing **B.** complicated **C.** intuitive **D.** unclear
Question 11. **A.** few **B.** little **C.** many **D.** much
Question 12. **A.** quality **B.** level **C.** amount **D.** number

Mark the letter A, B, C or D to indicate the best arrangement of utterances or sentences to make a meaningful exchange or text in each of the following questions from 13 to 17.

Question 13.
a. Khoa: I'm testing a simple water filter I designed for camping.
b. An: Interesting! Does it remove the bad smell from river water?
c. Khoa: Yes, activated carbon helps with that, and the flow is steady.
A. b – a – c **B.** a – b – c **C.** c – b – a **D.** a – c – b

Question 14.
a. Mai: Our team will present a prototype that assists people with limited vision.
b. Duy: We should explain how the sensor, which detects obstacles, vibrates gently.
c. Mai: I'll prepare a demo path with chairs and boxes.
d. Duy: I can answer questions about battery life and charging time.
e. Mai: Let's practice the pitch so the judges remember the key features.
A. a – c – b – d – e **B.** b – a – c – d – e **C.** a – b – c – d – e **D.** a – b – d – c – e

Question 15.
Dear Valued Community Member,
a. The device learns patterns from daily use, which allows it to suggest faster routes.
b. I'm excited to announce our new navigation watch for cyclists.
c. It provides turn-by-turn guidance through gentle vibrations on the wrist.

d. Early testers report that they feel safer because they can keep their eyes on the road.
e. Please sign up online if you'd like to join the second testing group next month.
Sincerely,
Cycling Innovations Team

A. a – b – c – d – e **B.** b – a – c – d – e **C.** b – c – d – a – e **D.** b – c – a – d – e

Question 16.
a. Great inventions often begin with a small frustration that someone refuses to accept.
b. After many failed attempts, inventors adjust materials, which makes the product reliable.
c. Moreover, user feedback turns a clever idea into a tool that truly solves problems.
d. Because markets change quickly, teams must update designs and keep costs low.
e. Therefore, the most useful devices are simple, durable, and easy to repair.

A. a – b – c – d – e **B.** a – c – b – d – e **C.** b – a – c – d – e **D.** a – c – d – b – e

Question 17.
a. These breakthroughs often result from combining knowledge from different fields and persistent experimentation.
b. Creative discoveries, from scientific inventions to artistic masterpieces, drive human progress and transform our world.
c. In Southeast Asia, young innovators are creating low-cost water filters and mobile apps to solve local problems.
d. For example, the discovery of penicillin revolutionized medicine, while the invention of the internet reshaped global communication.
e. Therefore, fostering creativity in education and research is essential for future development in all nations.

A. b – d – a – c – e **B.** d – b – a – e – c **C.** b – a – d – c – e **D.** d – a – b – e – c

Read the following passage and mark the letter A, B, C, or D to indicate the correct option that best fits each of the numbered blanks from 18 to 22.

Inventions have shaped human progress, transforming the way we live, work, and communicate. (18) _____. They represent human creativity, determination, and the desire to solve problems.

Throughout history, remarkable inventions have emerged during times of necessity. (19) _____. Such innovations reveal how challenges can stimulate human ingenuity.

(20) _____. Digital tools and global collaboration allow ideas to spread and develop faster than ever before. In contemporary society, (21) _____. These advancements raise both excitement and concern, as they affect industries, education, and even personal relationships.

Ultimately, inventions highlight the limitless potential of human imagination. (22) _____. They remind us that progress depends on curiosity, courage, and vision.

Question 18.
A. Innovations, which significance reshapes civilization, emerges from human curiosity and perseverance
B. Innovations, who significance reshapes civilization, emerge from human curiosity and perseverance
C. Innovations, that significance reshape civilization, emerge from human curiosity and perseverance
D. Innovations, whose significance reshapes civilization, emerge from human curiosity and perseverance

Question 19.
A. Inventions appear randomly without connection to societal needs
B. Necessity drives innovation, revealing human ingenuity's response to challenges
C. Only wealthy societies produce meaningful inventions
D. Historical inventions have little relevance to modern problems

Question 20.
A. Digital connectivity has enabled ideas to spread and develop more rapidly than ever
B. Digital connectivity has enabled ideas spread and develop more rapidly than ever
C. Digital connectivity has enabled ideas spreading and developing more rapidly than ever
D. Digital connectivity enables ideas to spreading and develop more rapidly than ever

Question 21.
A. So transformative is artificial intelligence that it revolutionizes sectors from healthcare to creative arts
B. So transformative artificial intelligence is that it revolutionizes sectors from healthcare to creative arts
C. So transformative is artificial intelligence that it revolutionized sectors from healthcare to creative arts
D. So transformative has artificial intelligence that it revolutionizes sectors from healthcare to creative arts

Question 22.
A. Innovation always produces positive outcomes without any drawbacks
B. Controversial innovations still demonstrate humanity's limitless creative capacity
C. Only technical experts should engage with new technologies
D. Innovation has reached its limits in the modern era

Read the following passage and mark the letter A, B, C, or D to indicate the correct answer to each of the questions from 23 to 30.

Artificial intelligence represents one of humanity's most ambitious technological achievements, promising to revolutionize numerous aspects of modern life through automated decision-making and intelligent problem-solving capabilities. This rapidly evolving field combines computer science, mathematics, and cognitive psychology to create systems that can perform tasks typically requiring human intelligence.

AI applications have proliferated across diverse industries, transforming healthcare diagnosis, financial analysis, transportation systems, and manufacturing processes. Medical professionals now utilize AI-powered tools to identify diseases more accurately and develop personalized treatment plans for patients. Similarly, autonomous vehicles rely on **sophisticated** machine learning algorithms to navigate complex traffic situations and enhance road safety.

The development of AI technology raises important ethical considerations that society must address responsibly. Privacy concerns emerge as AI systems collect and analyze vast amounts of personal data to improve **their** performance. Additionally, job **displacement** fears grow as automation threatens traditional employment opportunities, particularly in routine-based occupations that machines can easily replicate.

Despite these challenges, AI continues advancing at an unprecedented pace, driven by improvements in computing power, data availability, and algorithmic sophistication. Researchers work diligently to ensure AI development prioritizes human welfare and maintains transparent, accountable systems. The future success of AI integration depends on balancing technological innovation with ethical responsibility and social consideration for all affected communities.

(Adapted from Lexiverse: Materials for National High School Exam)

Question 23. Which of the following best paraphrases the underlined sentence in paragraph 1?
A. AI is humanity's greatest technological success that will change modern life significantly.
B. This technology represents our most ambitious achievement in revolutionizing daily activities.
C. Artificial intelligence stands as one of our most challenging technological accomplishments.
D. AI constitutes one of the most ambitious tech advances, offering to transform modern existence.

Question 24. Which of the following is **NOT** mentioned as an AI application area?
A. medical diagnosis **B.** financial services
C. space exploration **D.** manufacturing operations

Question 25. The word **sophisticated** in paragraph 2 can be best replaced by _____.
A. complex **B.** primitive **C.** ineffective **D.** unreliable

Question 26. The word **displacement** in paragraph 3 is opposite in meaning to _____.
A. replacement **B.** creation **C.** elimination **D.** reduction

Question 27. The word **their** in paragraph 3 refers to _____.
A. privacy concerns **B.** personal data
C. AI systems **D.** performance

Question 28. Which of the following is **TRUE** according to the passage?
A. AI development has completely solved all ethical concerns about technology.
B. Machine learning algorithms are only used in transportation applications.
C. AI systems require personal data collection to enhance their functionality.
D. Job displacement affects all employment sectors equally through automation.

Question 29. In which paragraph does the writer discuss practical AI applications?
A. Paragraph 1 **B.** Paragraph 2 **C.** Paragraph 3 **D.** Paragraph 4

Question 30. In which paragraph does the writer mention ethical concerns about AI? **A.** Paragraph 1 **B.** Paragraph 2 **C.** Paragraph 3 **D.** Paragraph 4

Read the following passage and mark the letter A, B, C, or D to indicate the correct answer to each of the questions from 31 to 40.

[I] Revolutionary biotechnology innovations are reshaping medical treatment possibilities, offering unprecedented hope for previously incurable diseases. **[II]** Gene editing technologies, particularly CRISPR-Cas9 systems, enable precise modifications to DNA sequences with implications extending far beyond therapeutic applications. **[III]** Ethical considerations surrounding genetic manipulation demand careful evaluation of potential benefits against unforeseen consequences. **[IV]**

Personalized medicine represents a paradigm shift from standardized treatment protocols to individualized therapeutic approaches based on genetic profiles, lifestyle factors, and environmental influences. Advanced diagnostic tools can now identify predispositions to specific diseases decades before symptoms **manifest**, enabling preventive interventions that dramatically improve patient outcomes. **However, genetic screening raises complex questions about insurance discrimination, employment bias, and psychological impacts of knowing one's disease susceptibilities.**

Artificial organs and bioengineered tissues offer life-saving alternatives for patients facing organ failure, with laboratory-grown organs potentially eliminating transplant waiting lists and rejection complications. Three-dimensional bioprinting technologies create functional tissue structures using patients' own cells, minimizing immune system conflicts while addressing critical organ shortages. Nevertheless, these innovations require extensive clinical testing and regulatory approval processes that may delay patient access for years.

Nanotechnology applications in medicine promise targeted drug delivery systems that maximize therapeutic efficacy while minimizing side effects. **These microscopic interventions** can cross biological barriers previously impermeable to conventional treatments, reaching diseased cells with unprecedented precision. Critics warn that insufficient long-term safety data regarding nanoparticle accumulation in human organs necessitates cautious implementation despite promising preliminary results.

(Adapted from Lexiverse: Advanced Materials for National High School Exam)

Question 31. Where in paragraph 1 does the following sentence best fit?
Scientific breakthroughs represent humanity's most ambitious attempt to conquer biological limitations.
A. [I] **B. [II]** **C. [III]** **D. [IV]**

Question 32. According to paragraph 2, which of the following is **NOT** mentioned as a factor in personalized medicine approaches?
A. genetic profiles **B.** lifestyle factors
C. environmental influences **D.** family medical history

Question 33. Which of the following best summarises paragraph 3?
A. Artificial organs and bioengineered tissues provide life-saving alternatives for organ failure patients, with 3D bioprinting creating functional structures using patient cells, though extensive testing delays patient access.
B. Laboratory-grown organs eliminate transplant complications and waiting lists through bioprinting technologies that use patient cells, but regulatory approval processes remain unnecessarily lengthy.
C. Bioengineered tissues and artificial organs address critical shortages while minimizing immune conflicts, though clinical testing requirements may prevent patients from accessing these innovations quickly.
D. Three-dimensional bioprinting creates artificial organs that solve transplant rejection problems, with laboratory-grown alternatives providing immediate solutions for organ failure patients.

Question 34. The phrase **these microscopic interventions** in paragraph 4 refers to _____.
A. nanotechnology applications in medicine
B. targeted drug delivery systems
C. biological barriers and conventional treatments
D. diseased cells with unprecedented precision

Question 35. The word **manifest** in paragraph 2 is closest in meaning to _____.
A. disappear **B.** appear **C.** worsen **D.** improve

Question 36. Which of the following best paraphrases the underlined sentence in paragraph 2?
A. Nevertheless, genetic testing creates complicated concerns regarding insurance prejudice, workplace discrimination, and mental effects of understanding personal disease risks.
B. However, genetic analysis produces complex issues about insurance discrimination, job bias, and emotional consequences of learning about disease predispositions.
C. Yet, genetic screening generates intricate questions concerning insurance prejudice, employment discrimination, and psychological effects of disease susceptibility knowledge.
D. Still, genetic testing raises complicated concerns about insurance bias, workplace prejudice, and mental impacts of knowing personal disease vulnerabilities.

Question 37. According to paragraph 1, revolutionary biotechnology innovations offer _____.
A. complete solutions to all genetic disorders and conditions
B. immediate treatments without requiring ethical considerations
C. unprecedented hope for previously incurable diseases
D. affordable medical care accessible to all populations

Question 38. Which of the following is **TRUE** according to the passage?
A. Gene editing technologies have no implications beyond therapeutic applications and are limited to medical treatments only.
B. Advanced diagnostic tools can identify disease predispositions decades before symptoms appear, enabling preventive interventions.
C. Three-dimensional bioprinting eliminates all immune system conflicts without requiring patients' own cells for organ creation.
D. Nanotechnology applications in medicine have been thoroughly tested for long-term safety with comprehensive data available.

Question 39. Which of the following can be inferred from the passage?
A. Biotechnology innovations are ready for immediate widespread implementation without requiring additional safety evaluations or ethical considerations.
B. Revolutionary medical technologies offer tremendous potential benefits but require careful balance between innovation and safety, ethics, and accessibility concerns.
C. Personalized medicine eliminates all treatment complications and provides perfect solutions for every patient regardless of individual circumstances.
D. Artificial organs and nanotechnology applications face no regulatory challenges and can be implemented immediately in clinical practice.

Question 40. Which of the following best summarises the passage?
A. Biotechnology innovations including gene editing, personalized medicine, artificial organs, and nanotechnology offer revolutionary medical possibilities, though ethical considerations, safety concerns, and regulatory challenges require careful evaluation before implementation.
B. Revolutionary biotechnology reshapes medical treatment through CRISPR gene editing and personalized medicine based on genetic profiles, while artificial organs eliminate transplant complications.
C. Medical innovations including genetic screening, bioengineered tissues, and nanotechnology promise unprecedented therapeutic outcomes, though insurance discrimination and regulatory delays remain significant obstacles.
D. Gene editing technologies and three-dimensional bioprinting create personalized medical solutions with targeted drug delivery systems, while critics raise concerns about long-term safety and ethical implications.
